

## Tenneo LMS v8.1 launching soon

After the **Path Breaking** Success of v8.0, we're **Introducing v8.1**. Intelligent. Connected. Performance-driven.

Tenneo LMS v8.0 was an overwhelming success as organizations from various industries have improved their learning outcomes by enhancing the learning experience, employee engagement & performance. To take this a notch higher, we are developing v8.1, a better, faster, smarter version of Tenneo LMS.

### 1. User Adoption Made Even More Easy, Simple & Effective

Organizations can enhance their sales & customer service training outcomes with a pathbreaking **video assessment platform** that evaluates a video for its pitch, tonality, key phrases & body language using our proprietary AI evaluation engine. The LMS will also be integrated with **lorad, a digital adoption platform**, for creating systems training content directly from within the LMS. v8.1 also offers an **industry-specific pre-packaged content library** to help you commence & streamline your digital learning journey. These features will be in line with our commitment to making our customers go live within 8 weeks.

### 2. User Experience Made Even More User-centric

Our all-new revamped **mobile app is in sync with the latest design paradigms in UI/UX** which will offer your learners a better, intuitive & user-friendly interface. The redesigned **landing pages with additional widgets & functionalities** will prove vital in grabbing user attention, streamlining the learning process & developing a sense of ownership among users.

### 3. Training Made Even More Secure

v8.1 comes with **improved and strengthened system security**. The added layer of security is achieved by adding Code obfuscation for the application source code, Binary make use of banned API(s), malloc function, Random function(s), and Anti-malware scan on uploaded files. You can also control all the settings and configurations during deployments from the **central admin utility control page**. This will help you reduce errors and improve training efficiency.

### 4. Integration Made Even More Seamless

To enhance the connected learning experience, v8.1 will support integration with two more **external content sites - Go1 and MicroLearn**. This integration will enable admins to import content and assign to learners for more targeted learning. v8.1 will also be **integrated with Google Workplace** and allow booking Google Calendar along with Outlook Calendar for classroom trainings.
